

# The Big Picture: Madhya Pradesh Shaikshik Samwaad

A clear, simple, everyday English breakdown of teacher attendance, classroom habits, and district performance across August & September 2026.

## 1. The State at a Glance: What Happened?

- Every month, Madhya Pradesh brings Middle School (Classes 6–8) teachers together at cluster schools to learn practical ways to teach Math and Science better.
- **Our Real Teacher Team:** Across all 52 districts, MP has **68,427 Middle School (Varg-2) teachers**. (Earlier estimates only looked at a smaller ~35k group, but the true state team is ~68.4k).
  - **How Many Came?** In August, **23,785 teachers** attended. In September, **23,169 teachers** attended. In total, **33,866 unique teachers** attended at least once — reaching about **half the entire state workforce**.
  - **Did All Districts Join?** In August, 50/52 districts participated (Dewas & Sehore had scheduling gaps). In September, **all 52 districts participated (100% full coverage)**, with Dewas and Sehore bouncing back into top performers.

## 2. The Attendance Story: Who Keeps Coming and Who Disappears?

|                                                                                                                                                                                     |                                                                                                                                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ■ <b>The Loyal Core (13,088 Teachers — 55% Retention)</b><br>Attended <i>both</i> August & September. These are your most dedicated educators who form the backbone of the program. | ■ <b>The One-Timers / Dropouts (10,697 Teachers — 45% Churn)</b><br>Came in August, but did not return in September. A simple WhatsApp or SMS reminder can bring them back.       |
| ■ <b>The New Inflow (10,081 Teachers — 43.5% New)</b><br>Joined for the first time in September. A great sign that the program is spreading to previously inactive schools.         | ■ <b>The Unreached Group (34,561 Teachers — 50.5% Untapped)</b><br>Have not attended either session yet. This is our biggest opportunity to grow participation in the next round. |

## 3. What Are Teachers Actually Doing in Classrooms? (The 4 Habits)

| Classroom Habit               | What Teachers Often Do (The Trap)                                                                            | The Better Way (Good Teaching)                                                                     | How Many Trapped? |
|-------------------------------|--------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|-------------------|
| 1. Using Learning Kits (TLMs) | Thinking that as long as kids are busy cutting paper or playing with kits, learning happens automatically.   | Pausing during the activity to ask questions that make children think and explain concepts.        | 48.1% of teachers |
| 2. Handling Mistakes          | Jumping in immediately with the right answer the moment a student struggles or makes a mistake.              | Letting the student finish thinking and using their mistake to understand where they are confused. | 38.0% of teachers |
| 3. Giving Praise              | Only praising the top students who get the answer right, which makes struggling students scared to speak up. | Praising effort and good thinking so every child feels safe trying.                                | 66.1% of teachers |
| 4. Student Discussions        | Asking a quick question, waiting 3 seconds, and then lecturing the answer themselves (Teacher Monologue).    | Letting students talk to their bench-partners first and argue out the solution together.           | 45.8% of teachers |

#### 4. The 4 Types of Districts (And What Each Needs)

| District Group                                 | What Is Happening?                                                                                               | Example Districts                                   | What Should We Do?                                                               |
|------------------------------------------------|------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|----------------------------------------------------------------------------------|
| ■ 1. The Champions<br>(14 Districts)           | High attendance AND high teaching quality. Both administrative push and classroom practice are working well.     | Harda, Narsinghpur, Raisen, Dewas, Sehore, Jabalpur | Celebrate their success and let their master trainers coach nearby districts.    |
| ■ 2. Full Hall, Low Learning<br>(15 Districts) | High attendance, but low learning. DPCs pushed teachers to show up, but sessions were just boring slide-reading. | Chhatarpur, Rewa, Satna, Damoh, Panna, Morena       | Ban pure lecturing. Make facilitators run small-group practice sessions instead. |
| ■ 3. Smart Core, Low Turnout<br>(11 Districts) | Great teaching scores, but low attendance. Urban hub schools did well, but rural teachers were left behind.      | Bhopal, Indore, Ujjain, Gwalior, Sagar, Ratlam      | Focus strictly on getting rural and remote block teachers to show up.            |
| ■ 4. Priority Support<br>(12 Districts)        | Low attendance AND low teaching scores. Both organization and teacher support need urgent intervention.          | Alirajpur, Barwani, Jhabua, Singrauli, Sheopur      | Send state team members for in-person support and retrain local facilitators.    |

#### 5. The 3 Simple Actions for the Next Round

- Bring the 34.5k Unreached Teachers to the Table:** Share block-by-block lists of teachers who haven't attended yet so local officers know exactly who to invite.
- Nudge the 10.6k Dropouts:** Send friendly WhatsApp/SMS reminders before the next meeting so teachers who came in August return.
- Switch from Lectures to Practice:** Train meeting facilitators to spend 70% of the time letting teachers discuss and practice with materials, rather than lecturing from slides.
